Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from The Possibilities of Modifying Lightning Storms in the Northern Rockies It has been demonstrated in the laboratory (1) and the natural atmosphere (2) that clouds of supercooled water droplets may be completely changed to ice crystals by the introduction of small quantities of dry ice into the area containing the supercooled clouds. Tremendous numbers of ice crystals are produced by the proper use of dry ice (solid carbon dioxide). Quantitative studies have shown that about 1016 ice crystals may be produced per gram of dry ice. Thus one pound of dry ice, which generally costs less than five cents, will produce 5 times 1018 ice crystals under optimum conditions in the free atmosphere. If there were enough moisture available to permit each particle to form an ice crystal inch in diameter approximately tons of snow would be produced per pound of dry ice. Under practical conditions there is neither enough moisture available in the atmosphere nor is it possible to distribute the dry ice efficiently enough to produce and sustain the potential quantities mentioned above. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
